Instructions for using the
3002 Swing Cut Base & Edge Beveler

The Swing Cut Edge Beveler is delivered with the file in the vertical position "A" to sharpen or bevel the side edge of your skis or snowboard. Always position the tool on the the base so that the rollers "B" are rolling on the base and the file runs along the side edge .
The position of the file in the tool determines whether you file the side edge or the base edge. Using the screw driver provided, remove the file from the vertical positon and place the file in the horizontal position "D" to tune the base edges. When tuning the base edge replace the file and stone in the vertical file position with the black plastic blanks "G".

Set the angle by setting the black dial "E" to the molded arrow "F" on the side of the tool that would lie adjacent to the base when using the tool. There is a molded arrow on each side of the tool.

Be sure to pull the tool only in the working direction as indicated by the arrow on the file.
